Education

Professional Engineering Degree

National School of Engineers of Carthage (ENICarthage)

2020-2023 Tunis

Infotronics Systems Engineering

Preparatory cycle degree

Preparatory cycle for engineering studies at Nabeul (IPEIN) entrance exam 2020 with a rank of 223

2018-2020 Nabeul

Technological preparatory program

Baccalaureate degree

High school Ibn mandhour

2017-2018 Metlaoui

technical sciences

Work Experience

Flutter Developer Engineer

January 2024 - Present PM Consulting

Development and implementation of ERP (Enterprise Resource Planning) software solutions for mobile application:

- Development of specialized pages for QR code generation and reading.
- Designing and developing interfaces dedicated to project management.
- Designing and creating custom home screen widgets for the application, linking Flutter with Android using channel method.
- Designing interfaces for task scheduling Gantt chart, dashboard, and a Kanban board for project lists, for each project.

Creation and development of a backup project:

- Designing interfaces in Flutter for scheduling backups of files, images, and databases at specified intervals using cron, and interfaces for displaying backup logs within a Flutter window.

Full-stack development intern

Development of a mobile e-commerce application

February 2023 - October 2023 CyberxLLC

- Created a mobile e-commerce app with separate versions for delivery drivers and customers/sellers, featuring localized ordering and AI-driven product recommendations.
- Developed full-featured functionalities for both customers and sellers, encompassing profile management, product browsing, order processing, and real-time delivery tracking, with an additional sales statistics visualization feature for sellers.

About me

I am a graduate of the National School of Engineers of Carthage, specialized in full stack development, actively seeking opportunities. My education in infotronics systems engineering has equipped me with a robust proficiency in programming languages and full stack development tools. Through my experience and the successful execution of a Final Year Project centered on mobile and web applications, I have honed my skills extensively in this dynamic domain. Fueled by an authentic passion for mobile and web development.

Expertise

Languages and Frameworks : Spring boot, Angular, Java, Typescript, CSS, Html, Java script, Dart, C, C++, Python, VHDL

Architecture : Microservices, Monolithic, MVC

Version Control and Project Tracking : Git, Firebase, Gitlab, Jira, Scrum

Database : MySQL, Mongodb

Operating Systems : Windows, Unix

Development Tools: NetBeans, Visual Studio Code, IntelliJ IDEA, Postman, Spring Tool Suite

Conception UML

Languages

Arabic
English
French

Interests

Passion for cooking

- Introduced an innovative opportunity for users to register as potential delivery drivers, promoting flexible employment and contributing to the expansion of the delivery network.
- Designed a complementary web platform to provide an optimal and personalized experience for users of the mobile application.
- Utilized PuTTY and GitHub for source code cloning during deployment, ensuring an efficient and reliable provisioning process.

Worker internship

Arduino Development for Uploading Instantaneous Flow Rates from Industrial Flowmeters to Thingsboard with Graphical Visualizations.

July 2022 | Gafsa Phosphate Company

Worker internship

Observation and Discovery of Software Systems

July 2021 | Gafsa Phosphate Company

- Discovered Software Systems and Transaction Processes.

Academic Projects

Intelligent Parking Management System with Fingerprint Recognition and Arduino Integration

End-of-Year Project

February 2022 - May 2022 | ENICarthage

- Study and design of an intelligent parking management system based on fingerprint recognition. Development of Arduino code to verify the authenticity of fingerprints for opening the parking entrance gate.

Design and Development: Clap to Find Your Phone

November 2022 - January 2022 | ENICarthage

- Designing innovative Flutter app to locate phone via clapping; audio recognition, user-friendly interface.
